Exhibition overview

The International Society of Biomechanics (ISB) was founded at Penn State University to promote the study of all areas of biomechanics at the international level. The ISB has a broad view of the science and application of biomechanics, believing that biomechanics has a major role in the study of all biological systems, from the level of the whole organism down to molecular size scales.

As a result the Society's membership includes scientists from a large variety of disciplines including anatomy, physiology, engineering (biomedical, mechanical, mechatronics, etc.), orthopedics, rehabilitation medicine, sports science, sports medicine, ergonomics, electrophysiological kinesiology and others.
